Otherwise, from the formula obtained above for the friction of a squarethreaded screw with nut, namely, $F \tan(a2.50)$, we have in the present case $\tan a$ ----and $\tan f .15$, whence $a13$ and $Lowf832$. Also $W40,000lb.$, $d1.5in.$, and $J36in$. Substituting these values in the formula, the result is $F328lb.281$. A screw of mean diameter $2Jin$. has 4 threads to the inch. Assuming the coefficient of friction as $.08$, calculate its efficiency. 282. A 1-in. bolt has 8 threads to the inch of mean diameter. 93...
