Excerpt: . . . we found the furnace in poor working condition because of a temporary defect in the gas supply, such that we could not regulate the temperature evenly over the entire curtain or measure it precisely by the pyrometer. After testing several curtains we therefore suspended these tests. The large sheets under these conditions made a much better showing than the small samples had made in the laboratory. Nevertheless these Chicago tests fully confirmed the conclusion, derived from our Boston tests, that asbestos cloth is rapidly weakened by the heat of an ordinary fire to an extent that makes a curtain composed wholly of asbestos cloth an unreliable fire screen for the proscenium arch of a theater, if expected to endure more than a few minutes; and it was proved that the asbestos canvas was so weakened that it would be ruptured easily by a blow...
